

## ONE-STOP BREAST CLINICS

**If your patient is experiencing symptoms of breast cancer or an irregularity has been identified through routine screening, you can refer them to one of our one-stop breast clinics. Our specialist clinics provide initial diagnostic tests in a single appointment.**

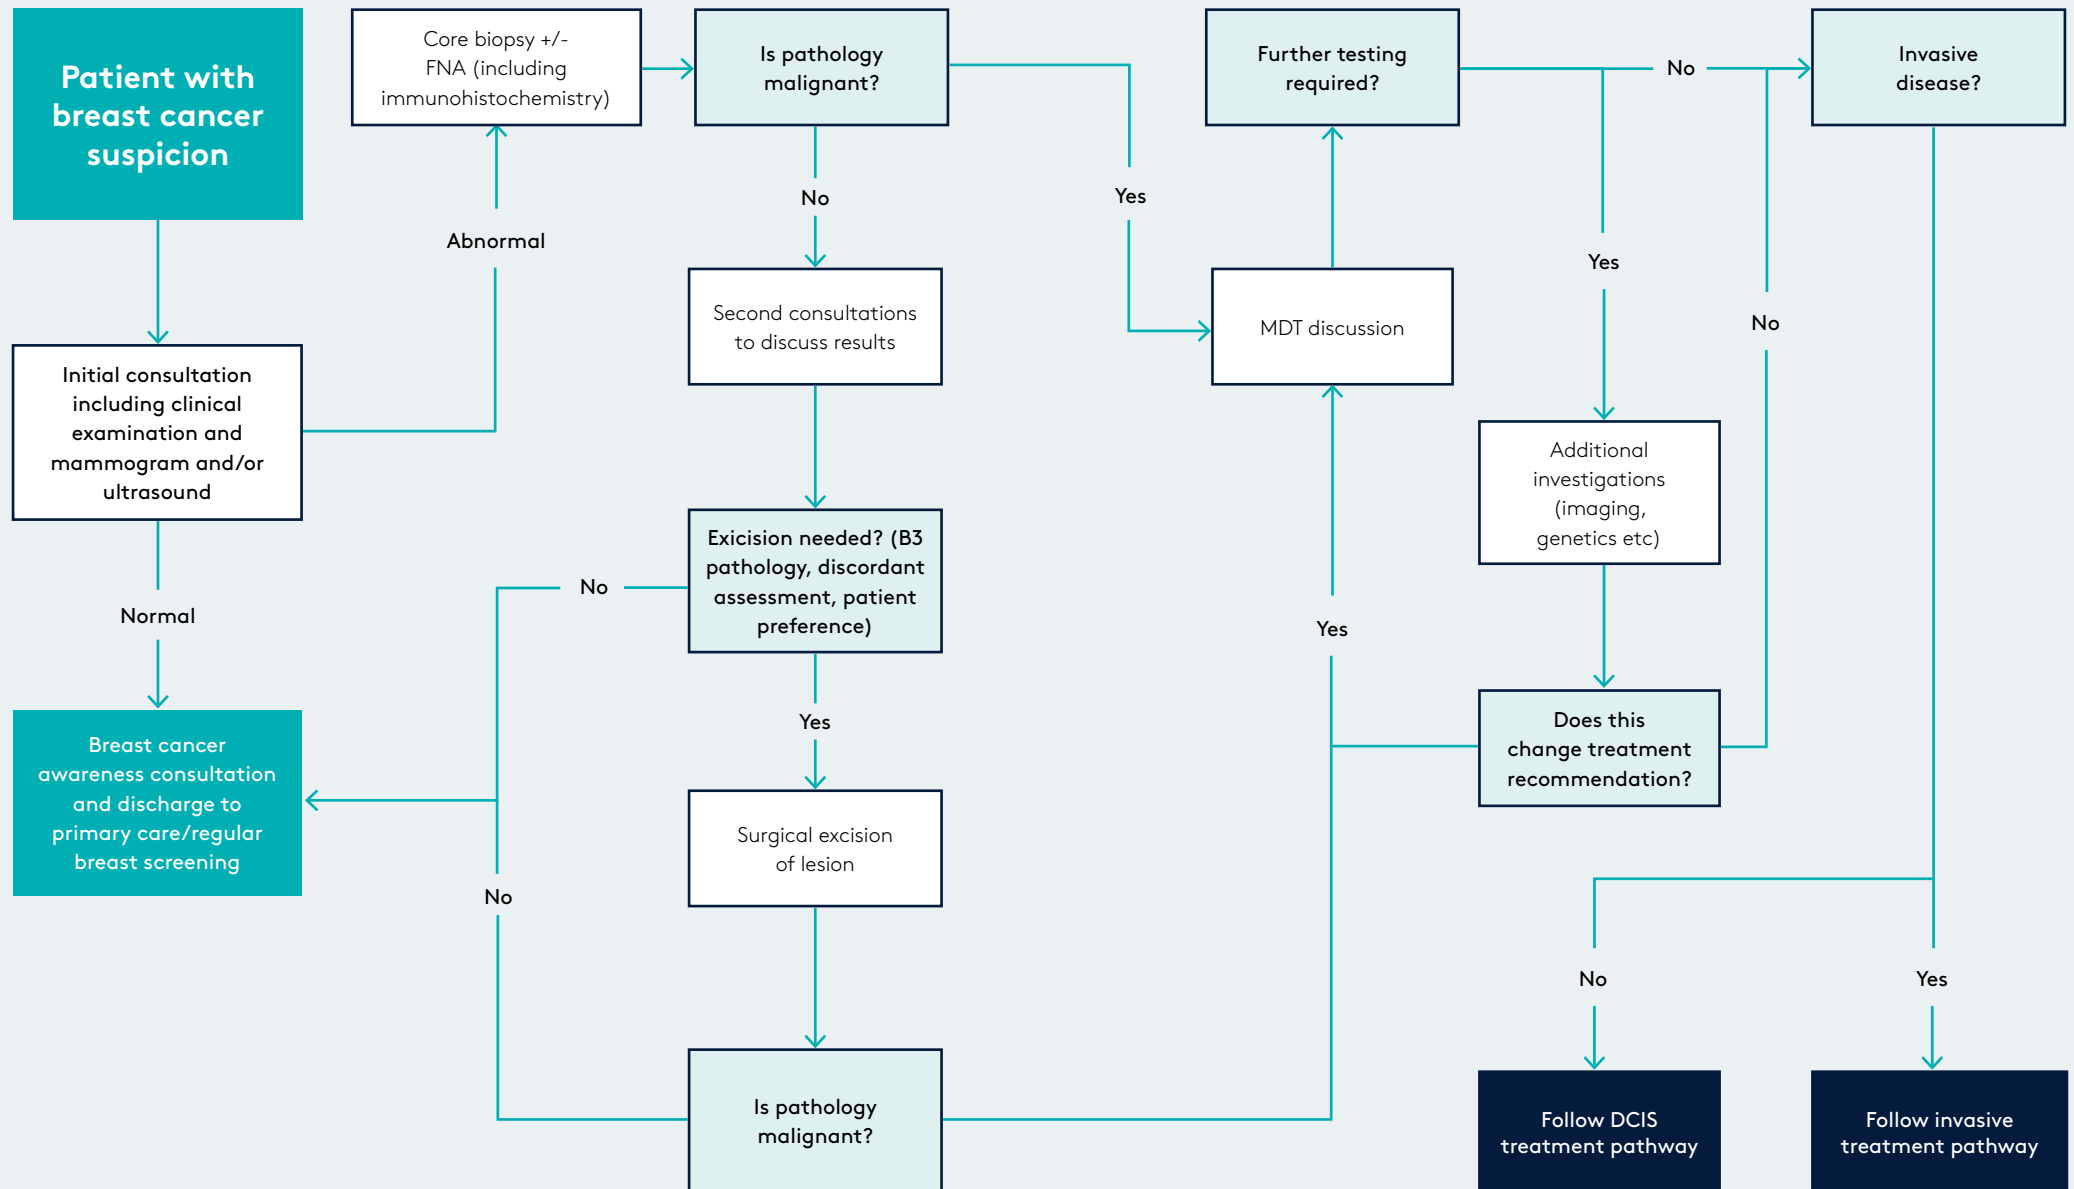

At the clinic, they will be guided by both our expert consultants and breast care nurses. Patients will receive a consultation about their symptoms followed by a physical examination, a mammogram, and an ultrasound if required. The results of these tests will be available during their appointment to give peace of mind on the same day.

If the test results show any irregularities then they may require a biopsy, which can be performed at the same appointment. Results from further examination will be available within days. Our specialist breast care nurses will be available to provide ongoing support while patients are waiting for the results.

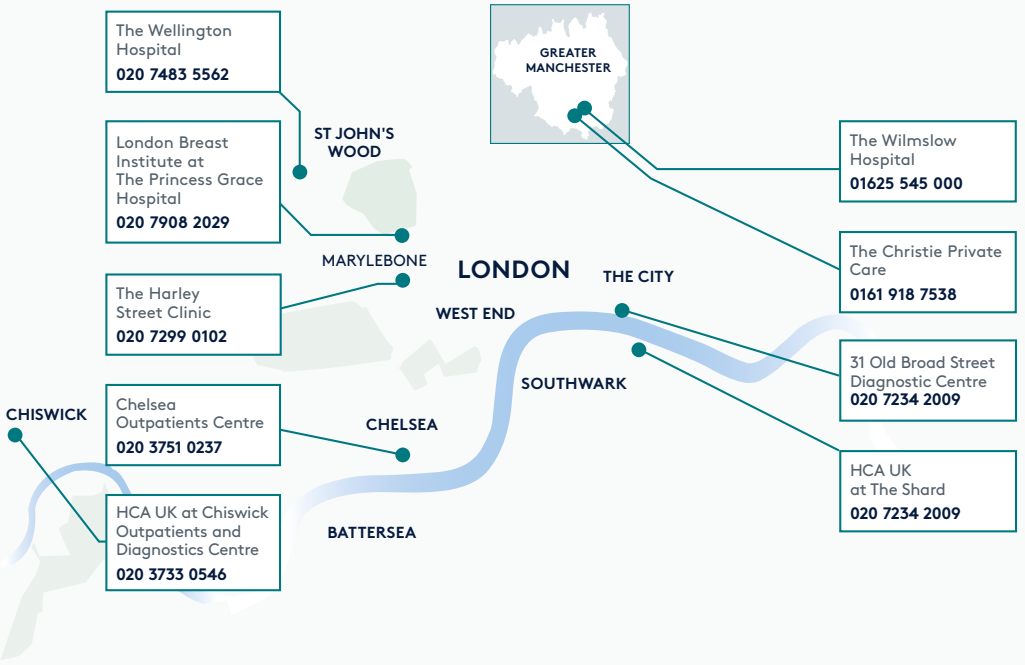

If the biopsy confirms malignancy, further tests and scans may be required to confirm the size and stage of the cancer. Our medical team will discuss the types of tests with your patient and make arrangements for these procedures. A named clinical nurse specialist will be available to support them throughout their treatment.

At HCA Healthcare UK, our multidisciplinary team (MDT) of breast cancer experts come together to discuss each individual diagnosis. The team consider all the different treatments options and make a recommendation on the best available treatment plan. Your patient's named consultant will discuss this treatment plan with them and together with their clinical nurse specialist they can answer any questions before treatment begins.
